Barriers to streamlined communications and adaptation

Traditional telephony and Interactive Voice Response (IVR) systems alone cannot meet the evolving demands

Multilingual and accessible communications are costly but critical for quality service and regulatory compliance

Call routing can be complex and slow, requiring multiple handoffs and long wait times

Employee satisfaction and time are lost to manual call routing and responding to simple and repetitive questions

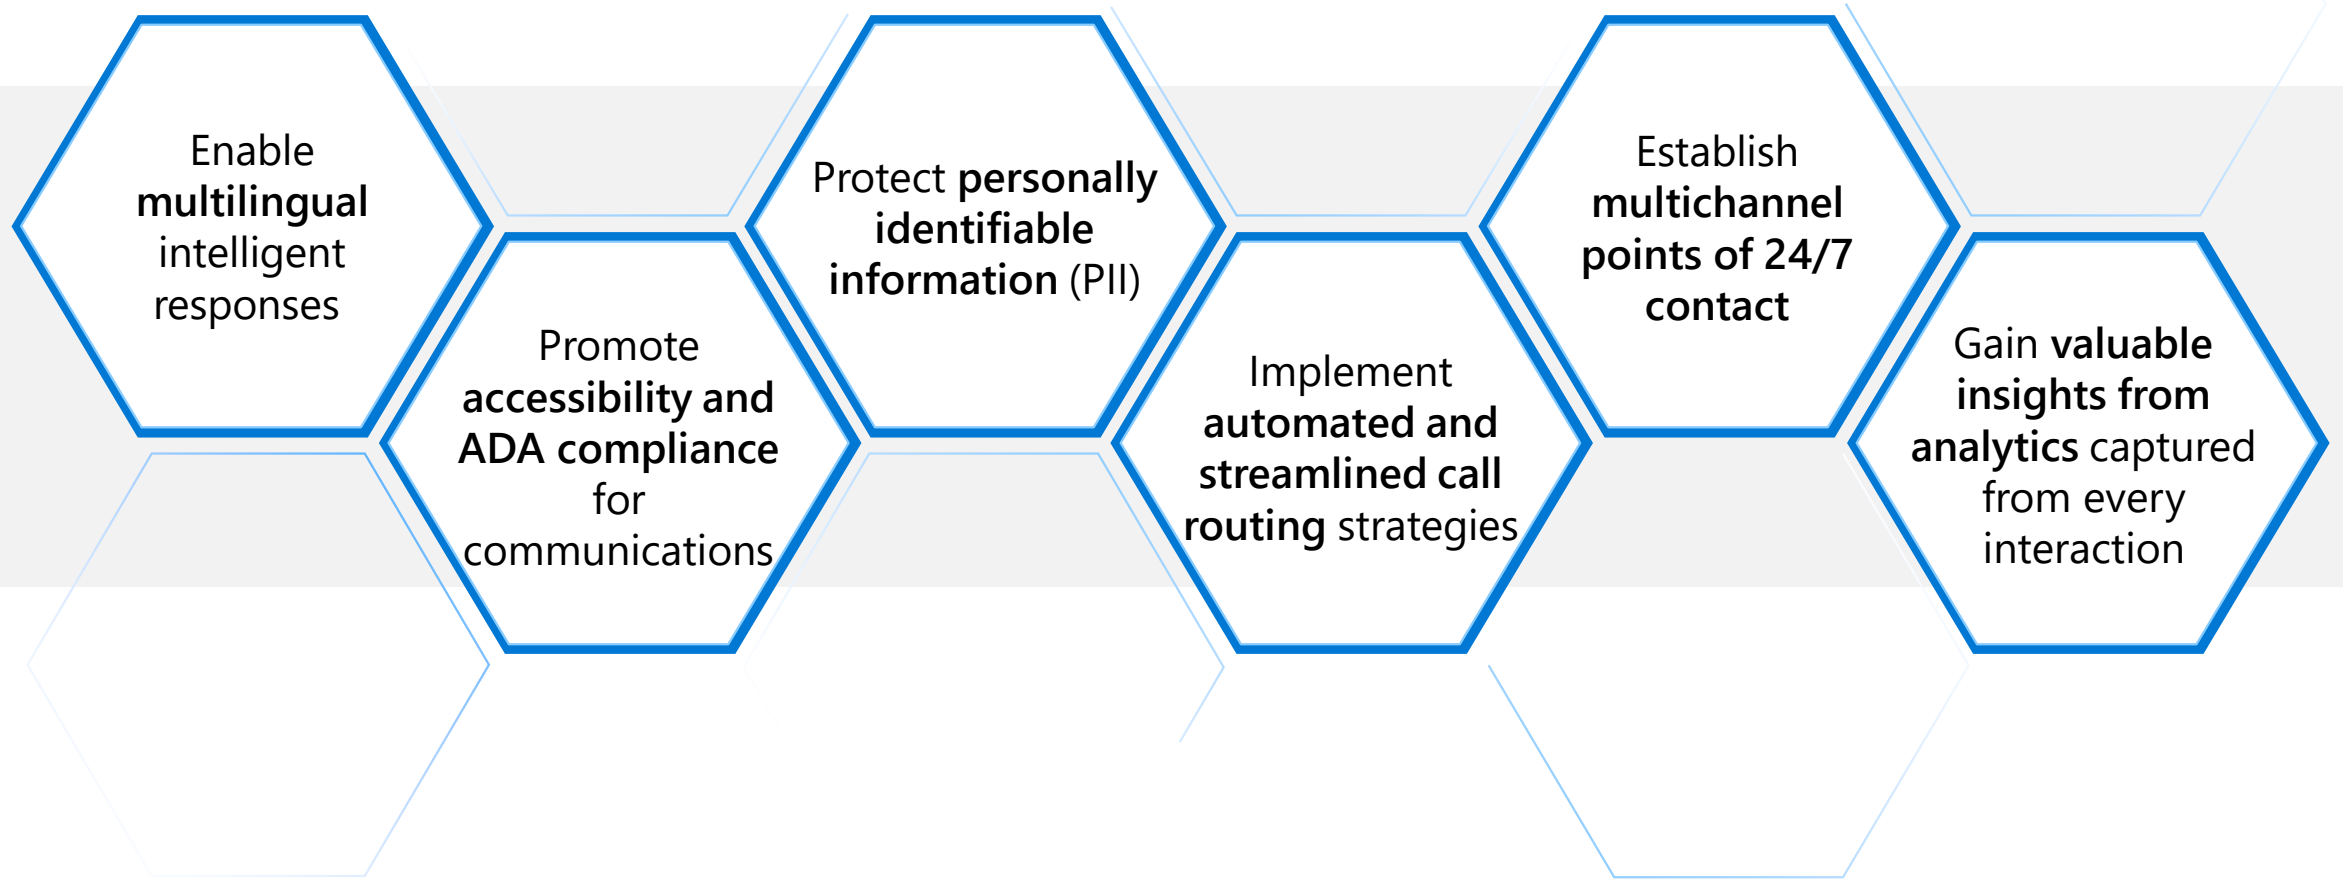

High cost of hiring, training and retaining agents

24/7 service can be cost prohibitive to implement and support

Inability to efficiently capture insights from customer interactions

Augment your existing system with conversational AI

Drive efficiencies and compliance and gain data-driven insights about customer needs

Azure OpenAI + Zammo.ai

100% Azure complete bot solution leveraging dozens of Azure AI and data services

Use **Azure OpenAI** to generate conversation and summarize your organization's documentation to provide human-like responses to bot inquiries

Zammo's platform allows you to **connect to backend data and live agent systems** and deploy to your existing IVR/telephony, voice assistant and chatbot channels

Design a user experience custom to your brand and communicate in **multiple languages**

Add **other complimentary AI capabilities** specific to your use case – i.e., Azure document translation, semantic search, etc.

Gain valuable insight about customer/employee interactions with **consolidated analytics dashboard**

Microsoft's Azure OpenAI Product Group (PG) has designated Zammo.ai as the sole Rapid POC engine, branded as the [Conversational Azure OpenAI / ChatGPT Accelerator](#).

If you want to schedule a demo that is customized to your customer's use case, and enable direct customer access, request a rapid POC via email at OpenAIAccel@Microsoft.com CC: Azure_AI_Accelerator@zammo.ai.

Branded, cross-platform voice and web apps

With the Zammo platform supported by Azure and Azure OpenAI Service, companies don't have to build multiple apps on different platforms. They can reduce time and expense by using one solution across multiple channels.

Azure is flexible with little blocks, modules, that you can build on or combine in order to create very robust and efficient solutions – one that works across Azure and Microsoft packages. That flexibility continues with Azure OpenAI Services so you can be innovative while supporting scalability and security.

“It is directly related to how easy Zammo technology is to use, how accessible it is for our end users no matter what language they speak—and including those with low vision and physical impairment.”

Guy Tonye
Head of Engineering, Zammo

Customers implementing OpenAI

City of Kelowna, British Columbia wanted a cost-effective way to keep both staff and citizens informed.

Instead of spending weeks or months putting together content and building workflows, they were able to **drop relevant documentation and web links into a user-friendly interface** for a faster outcome.

They are currently applying Zammo, which natively combines Azure OpenAI and Cognitive Service technology to achieve a ChatGPT experience using their own internal data. Specifically, they are developing workflows **providing summarizations of complex bylaws and permitting documents to help residents** spend less time applying and submitting correct applications the first time. The solution also **supports staff by letting them concentrate on applications** instead of commonly asked questions and requested corrections.

“The Zammo and Azure OpenAI combination is proving to be everything we wanted in a conversational AI solution”

Andreas Boehm
Intelligent Cities Manager
City of Kelowna

Customer success

Top 3 Largest US Education Department is automating conversations on voice and web channels in support of 1M students and parents. They are also using Azure OpenAI to make **ChatGPT available to over 400,000 students with the safety and security of Azure.**

Top 10 US City 311 services has emphasized use of reusable conversational libraries to quickly deploy 70+ conversational workflows covering everything from applying for a business license to reporting a pothole. Live on voice, mobile and web channels, departments are using **unified omni-channel analytics to improve rapidly without IT involvement.**

Customer success

[Diedrich Espresso](#) implemented conversational AI by deploying content to Google Assistant, Alexa, and to a website chatbot to help existing and prospective customers in finding the nearest store locations in a hands-free manner.

With no IT staff support, the owner of this 17-store coffee chain was able to **deploy to voice assistants and their chatbot in just one day.**

[Large online retail distributor](#) was utilizing Zendesk as a live agent chat solution. Inquiries were skyrocketing and agents were only available to answer customer inquiries during normal business hours.

The Conversational AI Accelerator was used to launch a website chatbot and publish informative content to Google Assistant and Amazon Alexa. **Conversational AI now handles over 75% of the incoming questions and provides 24/7 availability.** Seamless integration with Zendesk means that customers are transferred to a live agent only when necessary for more nuanced questions.

Customer success

Montgomery County, Maryland – Using conversational AI, Montgomery County was able to accelerate the implementation of a support solution for its 311 Customer Service Center and Department of Health and Human Services.

In the first two weeks, automation **lowered costs by \$5,900 per day, the agency interacted with over 104,000 users, and service was provided 24/7** as opposed to only during business hours. By taking advantage of this immediate, no-code accelerator, Montgomery County met the increased demand for service.

[Montgomery County Government \(Maryland\) uses Azure AI-based Zammo.ai to support successful COVID-19 vaccination program](#)

King County, Washington – When the public flooded King County with questions about COVID-19, the government was only at the start of its AI work. The demand produced by the pandemic meant that King County needed to implement an advanced conversational AI accelerator quickly.

By using analytics to tailor their content, they **addressed priority issues and reduce missed utterances by 85%**. They also found that the chatbot **saved nurses 35% of their time** by weeding out residents who did not have COVID-19 symptoms.
